American Mathematical Society

The AMERICAN MATHEMATICAL SOCIETY, founded in 1888, is the oldest society in the United States devoted to promoting the interests of mathematical scholarship and research. The Society serves its membership by publishing books and journals, holding meetings, and providing reviewing, indexing, employment information, and other services useful to the mathematical community.

The membership of the AMS is approximately 20,000. This includes more than 3,500 members who live outside of North America.

privileges of membership

New Computerized Retrieval Service

The Online Data Base for Mathematics

This is an early announcement of a new service the Society, in collaboration with certain vendors, will soon be providing to mathematicians, scientists and librarians. Briefly put, all the bibliographic and subject-classification information concerning the books and articles reviewed in *Mathematical Reviews* since 1973 will be available online within a few months. The data base containing all this information, to be called MATHFILE, will be updated every month as new issues of *Mathematical Reviews* become available. As soon as MATHFILE has been installed by the vendors, anyone with a question about the mathematical literature from 1973 on will be able to communicate from a terminal, via inexpensive network communication facilities, with a central computer maintained by one of these vendors, and, using the vendor's retrieval software, obtain a listing of all the entries having the characteristics specified by the searcher.

Mathematical Reviews provides essentially complete coverage of pure mathematics, and of those works in applied mathematics, physics, engineering, computer science, biology, operations research and other fields that contain new and interesting mathematics. It contains reviews of 35,000 to 40,000 items per year. MATHFILE contains all the bibliographic information contained in the headings of all the entries in *Mathematical Reviews* since January 1973, together with all the primary and secondary subject classifications attached to those items. Furthermore, starting with the material from the July 1979 issue of *Mathematical Reviews*, all the significant words that occurred in the reviews themselves are in the file. This file is being indexed in many different ways by the vendors, with the result that you will be able to search through the file, more or less instantaneously, and locate all entries having any of a number of different attributes, or combinations thereof. The Society is preparing a search guide.

Online searching has these features which make it a powerful complement to—but not a substitute for—*Mathematical Reviews*.

- It provides many more ways of searching the literature than through the traditional author and subject indexes.
- Searches can be made very rapidly—so fast that they save money under any reasonable allocation of cost for the searcher's time.
- MATHFILE is always current, so that out-of-date cumulative indexes are no longer a problem.
- You can use it in the "automatic mode", as an SDI or alerting service.
- You can get the type of output format most convenient to your needs, and at a low cost.
